First Contentful Paint

Largest Contentful Paint

Speed Index

Use efficient cache lifetimes

Font display

Improve image delivery

INP breakdown

29 audits passed These audits met the performance thresholds

About This Report

This report was generated using the Google PageSpeed Insights API, which analyzes the content of a web page and provides suggestions to make it faster. It combines real-world field data from the Chrome User Experience Report (CrUX) with lab data from Lighthouse audits.

Core Web Vitals (field data) reflect real user experiences, while lab metrics provide controlled test results. For the most accurate picture of your site's performance, consider both data sources.
